

boost::statechart::
event< EvWaypoint117
< TSource, TOrthogonal > >

```
classDiagram
    class Base["boost::statechart::event< EvWaypoint117< TSource, TOrthogonal > >"]
    class Derived["cl_move_base_z::EvWaypoint117< TSource, TOrthogonal >"]
    Base <|-- Derived
```

The diagram illustrates an inheritance relationship. At the top is a white box representing the base class: boost::statechart::event< EvWaypoint117 < TSource, TOrthogonal > >. Below it is a grey box representing the derived class: cl_move_base_z::EvWaypoint117 < TSource, TOrthogonal >. The derived class has an additional attribute: + waypointIndex. A blue arrow with an open triangular head points from the derived class box up to the base class box, indicating that the derived class inherits from the base class.

cl_move_base_z::EvWaypoint117
< TSource, TOrthogonal >

+ waypointIndex
