

```
boost::statechart::  
event< EvKeyPressZ<  
    TSource, TOrthogonal > >
```

```
classDiagram
    class boost_statechart_event["boost::statechart::event< EvKeyPressZ< TSource, TOrthogonal > >"]
    class cl_keyboard_ev_key_press_z["cl_keyboard::EvKeyPressZ< TSource, TOrthogonal >"]
    boost_statechart_event <|-- cl_keyboard_ev_key_press_z
```

The diagram illustrates an inheritance relationship between two C++ classes. The base class, `boost::statechart::event< EvKeyPressZ< TSource, TOrthogonal > >`, is represented by a white box with a thin grey border. The derived class, `cl_keyboard::EvKeyPressZ< TSource, TOrthogonal >`, is represented by a grey box with a thick black border. A blue arrow with an open triangular head points from the derived class to the base class, indicating that `cl_keyboard::EvKeyPressZ` inherits from `boost::statechart::event`. Both class boxes are divided into three horizontal compartments, with the class name and template parameters occupying the top one.

```
cl_keyboard::EvKeyPressZ  
< TSource, TOrthogonal >
```
