

boost::statechart::  
event< EvWaypoint256  
< TSource, TOrthogonal > >

```
classDiagram
    class Base["boost::statechart::event< EvWaypoint256< TSource, TOrthogonal > >"]
    class Derived["cl_move_base_z::EvWaypoint256< TSource, TOrthogonal >"]
    Derived --|> Base
```

The diagram illustrates an inheritance relationship. A base class box at the top contains the text 'boost::statechart::event< EvWaypoint256 < TSource, TOrthogonal > >'. Below it, a derived class box contains 'cl\_move\_base\_z::EvWaypoint256 < TSource, TOrthogonal >' followed by a public attribute '+ waypointIndex'. A blue arrow with an open triangular head points from the derived class box up to the base class box, indicating that the derived class inherits from the base class.

cl\_move\_base\_z::EvWaypoint256  
< TSource, TOrthogonal >

+ waypointIndex
