

```
boost::statechart::  
event< EvWaypoint169  
< TSource, TObjectTag > >
```

The diagram shows a base class at the top and a derived class at the bottom. The base class is defined by a light gray box with a black border, containing the text 'boost::statechart::event< EvWaypoint169 < TSource, TObjectTag > >'. The derived class is defined by a gray box with a black border, containing the text 'cl\_move\_base\_z::EvWaypoint169 < TSource, TObjectTag >' and a public attribute '+ waypointIndex'. A blue arrow with an open triangular head points from the derived class to the base class, indicating inheritance.

```
cl_move_base_z::EvWaypoint169  
  < TSource, TObjectTag >
```

```
+ waypointIndex
```
