

boost::statechart::
event< EvWaypoint170
< TSource, TOrthogonal > >

```
classDiagram
    class boost_statechart_event["boost::statechart::event< EvWaypoint170< TSource, TOrthogonal > >"]
    class cl_move_base_z_EvWaypoint170["cl_move_base_z::EvWaypoint170< TSource, TOrthogonal >"]
    cl_move_base_z_EvWaypoint170 --|> boost_statechart_event
```

The diagram illustrates an inheritance relationship. A base class box at the top, representing `boost::statechart::event< EvWaypoint170 < TSource, TOrthogonal > >`, is connected by a blue arrow with an open triangular head to a derived class box below it. The derived class box, representing `cl_move_base_z::EvWaypoint170 < TSource, TOrthogonal >`, is shaded gray and includes a public attribute `+ waypointIndex` in its second compartment.

cl_move_base_z::EvWaypoint170
< TSource, TOrthogonal >

+ waypointIndex
