

boost::statechart::  
event< EvWaypoint222  
< TSource, TOrthogonal > >

```
classDiagram
    class Base["boost::statechart::event< EvWaypoint222< TSource, TOrthogonal > >"]
    class Derived["cl_move_base_z::EvWaypoint222< TSource, TOrthogonal >"]
    Derived --|> Base
```

The diagram illustrates an inheritance relationship. A base class box at the top contains the text 'boost::statechart::event< EvWaypoint222 < TSource, TOrthogonal > >'. A blue arrow with an open triangular head points from a derived class box below to the base class box. The derived class box is shaded gray and contains three sections: the first section has 'cl\_move\_base\_z::EvWaypoint222 < TSource, TOrthogonal >', the second section has '+ waypointIndex', and the third section is empty.

cl\_move\_base\_z::EvWaypoint222  
< TSource, TOrthogonal >

+ waypointIndex
