The diagram illustrates a generalization relationship between two event types. The top box represents the base event type, `boost::statechart::event< EvWaypoint230 < TSource, TOrthogonal > >`, which is divided into three horizontal sections. The bottom section is empty. The bottom box represents the derived event type, `cl_move_base_z::EvWaypoint230 < TSource, TOrthogonal >`, which is divided into three horizontal sections. The top section contains the event name and template parameters. The middle section contains the attribute `+ waypointIndex`. The bottom section is empty. A blue arrow with an open triangular head points from the top of the bottom box to the bottom of the top box, indicating that the bottom event type is a specialization of the top event type.
